

Papua New Guinea domain registration

Requirements for a com.pg domain application

Preparation checklist based on the PNG University of Technology domain application and policy

STATUS	PREPARED FOR	DATE
For registry confirmation	Hotel or lodge management	5 September 2026

1 Application route

Papua New Guinea University of Technology manages .pg domain registrations. The published DNS1.1 form instructs applicants to type Sections A and B, sign and seal Section C where appropriate, and email the completed application pages with proof of payment to dns@pnguot.ac.pg.

2 Responsibility and limits of service

The Project Coordinator will check the proposed name, prepare the DNS1.1 form, coordinate the name server details, lodge the application and follow up with PNGUoT. Lodge management must provide the exact legal and contact details, confirm the requested name, authorise and sign the declaration, apply the company seal where required, and pay registration and renewal fees. The developer or DNS provider must configure the name servers and Firebase records. PNGUoT alone approves the name and may request more information or revised technical details.

Requirement	Responsible party	What must be completed
Legal name and registration details	Lodge management	Supply current and accurate legal, postal and business registration information.
Domain name choice	Lodge management	Approve the preferred name and alternatives, and accept the risk that the preferred name may be unavailable.
Application preparation and lodging	Project Coordinator	Prepare the form, check attachments, submit by email and follow up with PNGUoT.
Declaration and company seal	Authorised client signatory	Read the policy, sign and date the form, and apply the seal where appropriate.
Registration and renewal fees	Lodge management	Confirm payment instructions, pay the applicable fee and provide the receipt.
Name servers and Firebase DNS	Developer or DNS provider	Configure at least two authoritative name servers, provide technical contacts and add Firebase records after approval.
Approval and delegation	PNGUoT DNS	Assess the application, request changes if needed and approve or decline the registration.
Ongoing ownership	Lodge management	Keep contacts current, protect account access and fund renewals before expiry.

3 Eligibility and name selection

- ☐ The applicant must demonstrate a local presence or interests in Papua New Guinea.
- ☐ The requested name is allocated on a first come, first served basis.
- ☐ Choose a name connected to the registered business or brand and check possible trademark conflicts before applying.
- ☐ The published form states that one registered name is allowed per business. Additional names require justification to the DNS administrator and attract a separate registration fee.
- ☐ Prepare at least two alternative names in case the preferred name is unavailable or not accepted.

4 Information required on form DNS1.1

Section	Required information
Application type	New domain name or re-delegation, and .com.pg as the selected domain type.
Organisation	Full legal name, PNG postal address and business registration number if applicable.
Administrative contact	Name, address, phone, fax if used, and email.
Technical contact	Name, address, phone, fax if used, and email. This will normally be the developer, ISP or DNS administrator.
Requested domain	The full preferred name ending in .com.pg.
Name servers	Primary and secondary server hostnames and IP addresses. A tertiary server is optional.
Declaration	Authorised person's name, signature, date and company seal where appropriate, confirming acceptance of the policy.

5 Name format

The published application notes state that the chosen label must be at least 4 characters and fewer than 63 characters. It must not begin or end with underscores, hyphens, spaces or punctuation. Full stops separate domain levels and are not part of the business name label.

- ☐ Preferred domain: _____ .com.pg
- ☐ Alternative 1: _____ .com.pg
- ☐ Alternative 2: _____ .com.pg
- ☐ Confirm spelling against the registered business or approved brand.
- ☐ Check the registry's WHOIS service at <https://whois.nic.pg/> before lodging the application.

6 DNS and Firebase preparation

The form requires at least two visible name servers before the application is processed. Because the website will be hosted on Firebase, the developer and DNS provider must agree who will host the authoritative DNS zone before lodging the form. Firebase Hosting records can then be added to that DNS zone after the domain is registered.

- ☐ Confirm the DNS hosting provider.
- ☐ Create the DNS zone for the requested .com.pg name.
- ☐ Provide at least two authoritative name server hostnames and their IP addresses.
- ☐ Confirm that the domain records are visible from the Internet before submission, as required by the application notes.
- ☐ After registration, add the Firebase domain verification and hosting records supplied by Firebase.
- ☐ Add email records separately if the lodge will use addresses at the new domain.

7 Fees and payment evidence

The PNGUoT DNS application published in November 2024 lists a K300 first registration fee for .com.pg and a K100 biennial renewal fee. The form says fees may be reviewed annually. Confirm the amount and obtain an invoice or payment instruction before paying.

Published payment detail	Value shown on the form
Account name	PNG UNITECH TRUST FUND
Account number	11188172
Bank	Kina Bank
BSB	028-311
SWIFT	KINIPGPG
Branch	Lae Top Town
Payment reference	Write the requested domain name and whether the payment is for registration or renewal.

8 Submission pack

- ☐ Typed DNS1.1 application form with Sections A and B complete.
- ☐ Signed and dated declaration, with company seal where appropriate.
- ☐ Copy of payment receipt or remittance advice showing the domain reference.
- ☐ Business registration evidence kept ready if the registry requests it.
- ☐ Administrative and technical contacts who can answer registry questions.
- ☐ Primary and secondary name server details already configured.
- ☐ Copy of the current Domain Name Policy Statement reviewed by the authorised signatory.

9 Submission and follow-up

Step	Action
1	Confirm name availability and the current fee with PNGUoT DNS.
2	Configure the name servers and verify that they are publicly visible.
3	Type the application, sign the declaration and make payment using the confirmed instructions.
4	Email the completed application and receipt to dns@pnguot.ac.pg .
5	Keep a copy of the sent email, form, receipt and registry response.
6	After approval, connect the domain to Firebase Hosting and test HTTPS, www redirection and business email records.
7	Record the renewal owner and set reminders well before the biennial renewal date.
